Appendix 4 - Assist and keypass interpretation

Event ID	Name	Description

When `qualifier="55"` is present, then look for its corresponding `value=""`; this will show you the value of the `event_id=""` to look at to find information. It is basically telling you that the shot on goal was assisted (in this case a 'keypass') by a pass and it is telling you where to look to find the pass details. For example:

```
<Event id="783279345" event_id="170" type_id="1" period_id="1" min="20"
sec="33" player_id="19645" team_id="52" outcome="1" x="98.0" y="65.9"
keypass="1" timestamp="2011-08-13T15:21:16.403" last_modified="2011-
08-13T17:21:17">
<Q id="1360104517" qualifier_id="140" value="95.7" />
<Q id="716687577" qualifier_id="154" />
<Q id="1024698286" qualifier_id="141" value="69.8" />
<Q id="548528358" qualifier_id="213" value="2.3" />
<Q id="1464195139" qualifier_id="212" value="3.6" />
<Q id="811964232" qualifier_id="56" value="Center" />
<Q id="629946245" qualifier_id="210" />
</Event>
<Event id="1079282470" event_id="171" type_id="15" period_id="1"
min="20" sec="35" player_id="2019" team_id="52" outcome="1" x="95.7"
y="69.8" timestamp="2011-08-13T15:21:17.559" last_modified="2011-08-
13T17:21:18">
<Q id="1372749641" qualifier_id="76" />
<Q id="1476860249" qualifier_id="20" />
<Q id="607536004" qualifier_id="102" value="53.5" />
<Q id="852431923" qualifier_id="65" />
<Q id="951864007" qualifier_id="154" />
<Q id="1904271995" qualifier_id="56" value="Center" />
<Q id="995057860" qualifier_id="103" value="4.2" />
<Q id="1206524667" qualifier_id="146" value="99.7" />
<Q id="1896231395" qualifier_id="22" />
<Q id="119954813" qualifier_id="147" value="53.8" />
<Q id="432940257" qualifier_id="29" />
<Q id="2000327362" qualifier_id="55" value="170" />
</Event>
```

So you can see that the value attribute with `qualifier_id="55"` is telling you to look at `event_id="170"` from the preceding event.

By looking at `event_id="170"` you can see this was a pass (`type_id="1"`) and `qualifier_id="55"` tells you that it assisted the shot on goal that was saved (`type_id="15"`).

Note that `keypass="1"` indicates a pass that led directly to a shot on goal (but not a goal)

and `assist="1"` denotes a pass that led directly to a shot that was a goal.

Appendix 5 - The <Event> tag

Event ID	Name	Description
----------	------	-------------

Some of the attributes within the <Event> tag can cause confusion when it comes to interpreting their meanings and uses.

An example:

```
<Event id="2044318208" event_id="153" type_id="5" period_id="1"
min="19"
sec="31" player_id="49396" team_id="368" outcome="1" x="-2.0"
y="53.3"
timestamp="2012-06-23T20:04:45.40" last_modified="2012-06-
23T20:04:45">
```

Definitions:

- id="2044318208" This is the absolute unique integer that we assign to each individual match event and it can be used to database the event and search at a later date.
- event_id="153" This is the reference to the order of the match events within this match only and the count runs simultaneously for each team.
- For example (NB in a real F24b match file, the two event_id="1" attributes are actually the team line-ups, so treat the below example as merely theory for illustrative purposes):

Team A's first match event is a successful pass from player 1 to player 2, so this is event_id="1"; the second event is another successful pass from player 2 to player 3, so this is event_id="2"; the third event is an unsuccessful pass from player 3 to player 4 as it was intercepted by the opposite team, so the event_id count stops at "2" for Team A (until they get the ball back in possession, at which point their count will start again at "3"). Now that Team B have the ball, let's say there is a successful pass from their player 1 to their player 2, so Team B's event_id count begins at "1", then there's another successful pass from their player 2 to player 3, so this is event_id="2" ... this alternate ascending count continues through the match for both teams as their number of match events increase.

- timestamp="2012-06-23T20:04:45.40" This is the timestamp that relates to the date and time that the event occurred within the match.
- last_modified="2012-06-23T20:04:45" This relates to the time that the event was last modified by our analysts, for example an event could be edited, deleted or a new one inserted.

*Important note: whilst at first glance event_id looks as though it can be used to order each team's

match events chronologically, there are sometimes cases that after our analysts have reviewed each

match, that the timestamp of the event can be tweaked. In which case this can knock the

event_id's out of order (eg instead of event_id="1", then event_id="2" and event_id="3", it

could change to event_id="1", then event_id="3" and event_id="2").

So please be aware that you should always order events by the following attributes (in this order):

- team_id; then

- period_id; then
- min; then
- sec; and then
- timestamp.

Appendix 6 - How events are deleted

Event ID	Name	Description

An example of a deleted event will look something like this in the feed:

```
<Event id="328486810" event_id="26" type_id="43" period_id="1"
min="4"
sec="8" player_id="2399" team_id="110" outcome="1" x="0.0" y="0.0"
timestamp="2010-12-04T15:04:17.278" last_modified="2010-12-
04T15:04:34">
<Q id="19756363" qualifier_id="56" value="Back" />
<Q id="371368182" qualifier_id="144" value="50" />
</Event>
```

Where type_id="43" describes this event as one that has been deleted from the game file.

qualifier_id="144" is used to inform you about the type of match action that was deleted, in this

case value="50" describes the deleted event as one that was a 'dispossession' event.

If you database each of the F24 match files that we send as the game progresses, when a deletion

occurs, you will be able to search id="328486810" from the previous F24 files you have received during the game.

You will then be able to locate the specific event from a previously delivered match file, which would

have looked something like this:

```
<Event id="328486810" event_id="26" type_id="50" period_id="1"
min="3"
sec="37" player_id="2399" team_id="110" outcome="1" x="65.3" y="2.7"
timestamp="2010-12-04T15:03:47.195" last_modified="2010-12-
04T15:03:47">
<Q id="313977382" qualifier_id="56" value="Right" />
</Event>
```

*This can only be achieved if you database each F24 match feed as it is delivered live. If not and you allow each F24 match feed to be overwritten with every new delivery, then the only evidence that you will see that there was a deleted event is by the inclusion of the type_id="43" attribute.

Notes:

- Once we delete an event, the associated event's data will be removed from the feed and so this will only be visible in the feeds that were produced before the event was deleted.
- The value of the event_id="" attribute remains associated with its deleted event and the ascending count continues to increase in just the same way as if it were any other type_id. So for example, event_id="1", event_id="2" and event_id="3" which could relate to pass, pass and pass might then become; pass, deleted event and pass.

Appendix 7 - How events are edited/modified

Event ID	Name	Description
----------	------	-------------

We can edit events either live in-play or during our post-match data verification checks; these can be things such as slight player position changes in formations, or the official time of a goal adjusted by a couple of seconds etc.

To associate an event as being edited, we make use of the last_modified attribute eg:

last_modified="2010-12-04T15:03:47"

By using this attribute, it allows you to avoid the situation whereby you'd be faced with having to parse every row of the feed each time a new file is delivered, in an attempt to make sure nothing had been edited.

Instead, by looking for the last_modified attribute's appearance only, this will allow you to parse just the new events that are delivered each time, safe in the knowledge that until this attribute is flagged up on your parser, that all previous information can be deemed as correct.

Q id

Whilst the id associated with the event does not change (eg Event id="316446219") in the occurrence of an edited event, the qualifiers – if modified – will be associated with new id value in the id attribute ie Q id="212475322"

Appendix 8 - Outcome definitions

Event ID	Name	Outcome 0	Outcome 1
1	Pass	Unsuccessful pass ie pass did not find team mate	Successful pass
2	Offside Pass	Always set to "1"	

3	Take On	Unsuccessful – player lost possession or was tackled	Successful take on
4	Foul	Player who committed the foul	Player who was fouled
5	Out	The team that put the ball out	The team that therefore gained possession
6	Corner Awarded	The team that conceded the corner	The team that won the corner
7	Tackle	Unsuccessful attempted tackle/challenge from this team to the team on the ball ie other team retains possession after the challenge	Successful tackle ie challenging player wins possession of the ball from the other team
8	Interception	Always set to "1"	
9	Turnover	n.a	
10	Save	Always set to "1"	
11	Claim	Keeper drops the ball after an attempted catch from a cross. The keeper may then pick up the ball again and retain possession, but this would be a separate event	Keeper catches the cross in one attempt ie no drop
12	Clearance	Always set to "1"	
13	Miss	Always set to "1"	
14	Post	Always set to "1"	
15	Attempt Saved	Always set to "1"	
16	Goal	Always set to "1"

42	Good skill	Always set to "1"	
43	Deleted Event	Always set to "1"	
44	Aerial	Player lost aerial duel	Player won the aerial duel
45	Challenge	Always set to "0" ie. a challenge by definition is unsuccessful and the player does not win the ball (by winning the ball this would be a tackle ie type_id="7")	

47	Rescinded card	Always set to "1"	
49	Ball recovery	Always set to "1"	
50	Dispossessed	Always set to "1"	
52	Keeper pick-up	Always set to "1"	
53	Cross not claimed	Always set to "1"	
54	Smother	Always set to "1"	
55	Offside provoked	Always set to "1"	
51	Error	Always set to "1"	
56	Shield ball opp	Always set to "1"	
57	Foul throw in	Player who conceded the foul throw	Player who won the foul throw
58	Penalty faced	Always set to "0"	
59	Keeper Sweeper	Goalkeeper comes off the line and clears ball but possession switches to other team (not the same as player clearing ball out of play which is outcome="1")	Goalkeeper comes off the line and either clears ball to another team mate (ie possession retained) or straight out of play
60	Chance missed	Always set to "0"	
61	Ball touch	Player unsuccessfully controlled the ball ie lost possession	Ball simply hit player unintentionally
63	Temp_save	Always set to "1"	
64	Resume		
65	CRD		
66	Possession Data		

67	50/50	Player lost 50/50 duel	Player won 50/50 duel
68	Referee Drop Ball	Always set to "1"	
69	Failed to block	Always set to "1"	
70	Injury Time Announcement	Always set to "1"	
71	Coach Setup	Always set to "1"	
72	Caught offside	Always set to "1"

Appendix 10 - Period ID list

Period	Period_id
First half	1
Second Half	2
First period of extra time	3
Second period of extra time	4
Penalty shoot out	5
Post-game	14
Pre-game	15
Pre-match	16

Appendix 11 - Pitch co-ordinates and direction of play

This is based on the direction of attack always being from left to right on the x-axis, regardless of the team or period of the game, the defending goal line is always where $x=0$ and the attacking where $x=100$. All measurements for events given in the feed should therefore be taken in relation to percentages.

Appendix 12 - Goalmouth co-ordinates

EVENT - Goal, Attempt Saved

Qualifier	end_y	end_z
Low Left	$(51.8 \leq \text{end_y} \leq 54.8)$	$(0 \leq \text{end_z} \leq 20)$
High Left	$(51.8 \leq \text{end_y} \leq 54.8)$	$(20 \leq \text{end_z} \leq 38)$
Low Centre	$(48.2 \leq \text{end_y} \leq 51.8)$	$(0 \leq \text{end_z} \leq 20)$
High Centre	$(48.2 \leq \text{end_y} \leq 51.8)$	$(20 \leq \text{end_z} \leq 38)$

HighRight	(0 <= end_y <= 44.2)	(60 <= end_z <= 100)
High	(44.2 <= end_y <= 55.8)	(60 <= end_z <= 100)

Appendix 13 - Pitch zones

When Qualifier 56 is shown with an event it will also display a value which can be right, left, centre or back. The diagram below highlights what these zones are on the pitch.

Qualifiers 16, 17, 18, 19 and 60 - 71 refer to areas of the pitch. The below diagram illustrates where these zones are.

Appendix 14 - Playing positions

Event ID	Name	Description
----------	------	-------------

When Event 34 is shown it will include Qualifier 30, 130 and 131.

- 130 will indicate the formation the team will be playing in
- 30 will list the players
- 131 will list the playing positions

The order that the players are listed in qualifier 30 will be the same order as the positions listed on qualifier 131. For example:

```
<Q id="1998281501" qualifier_id="130" value="8" />
```

```
<Q id="193244804" qualifier_id="30" value="59936, 37748, 42427, 8758,  
17127, 51507, 20467, 21091, 12297, 41792, 43274, 8597, 57214, 81880,  
37096,  
13227, 56861, 15675" />
```

```
<Q id="280405493" qualifier_id="131" value="1, 2, 3, 4, 5, 6, 7, 8, 9, 10,  
11, 0, 0, 0, 0, 0, 0, 0" />
```

With regards to the qualifier id 130 (ie formation), this can be interpreted as the team playing in a 4231 formation which is depicted below from formation number 8.

For line ups using qualifier id's 130 and 131 in conjunction, you can see for example that position 1 will be player 59936 and position 7 will be 20467. Where position = 0, this relates to a substitute for which we do not current record the exact playing position.

The diagrams [here](#) show all of the possible formation numbers and the layout of players in this formation – note that team formation #1 is not used. These are all the formations that Opta Sports can provide. Please email customerservice-uk@optasportsdata.com to find out a little more information if these tactical formations are not understood.
